Experience

Zscaler Bangalore, KA

Senior Software Engineer *Oct 2025 – Present*

- Built a full-stack internal portal serving multiple teams, with a React.js frontend built on an in-house CSS framework and a Python/FastAPI microservice backend using Paramiko to SSH into cloud-hosted VMs for orchestration, exposing RESTful APIs consumed via Axios.
- Designed Protocol Buffers (protobuf) schemas for core product features, implemented send/receive logic over an internal messaging protocol, and authored optimized SQL and NoSQL database queries powering CRUD operations on feature configuration.
- Built a Python health-check and monitoring service that periodically polled all nodes across cloud environments (AWS/GCP), pushed alerts to the team via a Google Chat bot, and logged metrics, improving system visibility and reducing downtime.
- Developed a config-management utility that fetched configs via SCP, version-controlled them in Git, and used Terraform to codify infrastructure state for traceability and fast recovery.

Software Development Engineer *Feb 2023 – Oct 2025*

- Automated 1,250+ test cases (Python, Pytest, Docker) within GitLab CI/CD pipelines, increasing regression stability by 27% and cutting execution time by 2 hours via containerized, parallelized test environments on Kubernetes.
- Developed automated sanity-check packages that reduced service-disruption incidents by 70% during progressive cloud rollouts by validating upgrades across staggered deployments, automating scaling decisions and deployment gates.

BQP Bangalore, KA

Fullstack Developer Intern *Oct. 2021 – Feb 2023*

- Designed and implemented RESTful APIs with secure JWT-based authentication in Django, enabling stateless session management and scalable microservice-oriented login systems deployed on AWS EC2.
- Dockerized the Django backend and configured CI/CD pipelines with Jenkins for automated builds, streamlining deployment across staging and production environments.
- Developed a responsive Simulation Workspace UI using React.js, Redux, and Tailwind CSS, consuming data from backend microservices with predictable global state management.

TheKabadiwala Bhopal, MP

Web Developer Intern *Feb 2021 – May 2021*

- Developed Admin Portal modules using ASP.NET Core Razor Pages backed by SQL Server, enabling internal teams to manage revenue, users, and resource allocation.
- Built a data visualization dashboard using Blazor WebAssembly with RESTful API integrations, providing stakeholders with actionable insights into company performance.

Technical Skills

Languages: Python, Go, Rust, JavaScript, TypeScript, C++
AI & ML: LLMs, RAG, LangChain, Prompt Engineering, Agentic Frameworks, Gemini, Ollama, GenAI
Frameworks: React, Django, FastAPI, ASP.NET Core, Bootstrap, Tailwind CSS
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Terraform, GitLab CI/CD, Jenkins
Databases: PostgreSQL, MongoDB, Redis
Testing & Tools: Pytest, Playwright, Git
Concepts: Microservices, RESTful APIs, Networking, Security Best Practices, System Administration

Projects

TermAI | *Rust, Ollama, SQLite, GitHub Actions* | github.com/Vruttant/termai July 2026

- Built a privacy-first, cross-platform CLI in Rust that translates natural language to shell commands and diagnoses failing commands using a local LLM (Ollama), ensuring zero data leaves the machine.
- Implemented a local Retrieval-Augmented Generation (RAG) pipeline with vector embeddings, SQLite storage, and cosine-similarity search over incrementally indexed project files to ground responses in source code.
- Shipped a GitHub Actions release pipeline building 4 targets (Windows, Linux, macOS) and published to the winget and Scoop package managers; optimized the binary to under 5 MB with ∼18 ms startup.

Education

Technocrats Institute of Technology Bhopal, MP

Bachelor of Technology in Information Technology *August 2019 – May 2023*
